6. Signature (in ink) of applicant or person responsible for permit in Block A or B	7. Date:

Information Sheet

Take of Golden Eagle Nests 50 CFR 22.25

In order to expedite the processing of your application for take of Eagle Nest Permit, make sure you include the following with your completed Fish and Wildlife License/Permit Application, Form 3-200-18.

- 1 Describe the resource development or recovery operation which would require take of inactive golden eagle nests. (A copy of the development or operation plan would be sufficient).
- 2 How many nests do you want to take?
- 3 Describe the property where take will occur, including the exact (latitude and longitude) geographic location. Include an appropriately scaled map or plat that delineates the area of the resource development or recovery operation that marks the exact location of each nest requested to be taken. The map must be detailed enough so that the Service can readily locate each nest.
- 4 For each nest to be taken, calculate the area's golden eagle nesting population and identify on the map, from 3 above, which nests were used in the calculation. Provide a statement, including supporting documentation, from ornithologists experienced with golden eagles or other qualified persons who have made on-site inspections and can verify your calculations of the area's nesting population. If the Service has sufficient data to make these calculations (i.e., data has been provided to the Service through research project or other permit application), indicate where the data can be found.
- 5 Describe the activity during the resource development or recovery operation which would involve taking each nest.
- 6 How long do you need to have the permit valid? What are the starting and ending dates of the resource development or recovery operation activities?
- 7 What is your intended disposition of any nests taken? Are you willing to collect any nests for scientific or educational purposes? If so, provide the name(s) of the individuals/institutions that hold permits for such purposes.
- 8 What mitigation measures that are compatible with the resource development or recovery operation which would encourage golden eagles to reoccupy the site? Such measures include, but are not limited to, reclamation of disturbed lands to enhance golden eagle nesting and foraging habitat, relocation of inactive nests taken to suitable habitat, or establishment of one or more nest sites. If you plan to establish nest sites, describe the materials and methods to be used and the exact location of each artificial nest site on the map from 3 above.

*** Permission to trap eagles will not be granted until you suitably demonstrate to the State ADC supervisor, or a designated project leader, your qualifications and capabilities to trap golden eagles from the wild. All trapping must be done under the direct supervision (physical presence of personnel) of State ADC, State of Service personnel. Permission to trap will not extend beyond 90 days from the date of permit issuance. Service Law Enforcement personnel must be notified in writing by the State ADC supervisor of your name, address, location of the specified depredation area and tenure of the permission to trap eagles.

The public reporting burden for these reporting requirements is estimated to be 4 hours, including time for reviewing instructions, gathering and maintaining data, and completing and reviewing the forms. Comments regarding the burden estimate or any other aspect of the reporting requirement(s) should be directed to the Service Information Collection Clearance Officer, MS 224 ARLSQ, Fish and Wildlife Service, Washington, D.C. 20240, or the Office of Management and Budget, Attention: Desk Officer for the Department of the Interior; Washington, D.C. 20503.

An agency may not conduct and a person is not required to respond to a collection of information unless a currently valid OMB control number is displayed.
